

**WHEELS IN MOTION:  
FROM WASTE TO  
BETTER ROADS**

# GREENPAVE™ CR

In Australia we generate about 450,000 tonnes of used car tyres each year, of which 30% end up in landfill or stockpiles. Without greater recycling, this number could increase by 10-15% in the next few years. The road construction sector offers a lasting solution for recycling rubber from end-of-life tyres, by using crumb rubber in the manufacturing of modified binders. These highly-engineered binders are then used to manufacture our crumb rubber asphalt products.

**EVERY 500 TONNES OF GREENPAVE™ CR IS EQUIVALENT TO:**

**250** RECYCLED  
END-OF-LIFE  
TYRES

**50** TONNES OF  
RECYCLED  
ROAD

# INCREASED DURABILITY AND IMPROVED CRACK RESISTANCE

## CITYWIDE ASPHALT GROUP

We are one of Australia's leading producers of high-performance green asphalt products. Through our state-of-the-art plants, we offer an industry-leading range of sustainable products — including asphalt containing highly-engineered binders, high-content reclaimed asphalt pavement (RAP), and asphalt made with recycled glass, plastics or rubber.

Printed on 100% recycled paper.

## SUPERIOR BLEND

Citywide Asphalt Group is committed to supplying the asphalt industry with a product that is superior to other crumb rubber products on the market. GreenPave™ CR uses the wet blend method to create a more homogenous and consistent asphalt product from our specialised rubber binders.

## PROVEN MIX

We have supplied GreenPave™ CR for municipal projects in southwest Melbourne and on several trial projects. After multiple applications, not a single defect has been recorded — confirming the industry-leading performance of GreenPave™ CR.

## ADDED BENEFITS

Apart from reducing landfill and dangerous stockpiles, the benefits of crumb rubber asphalt include its increased durability, proven crack resistance, and enhanced elasticity. With demand for this product steadily rising, GreenPave™ CR is being manufactured at both Citywide's production facilities using our warm mix technology — which further improves its environmental credentials.

## APPLICATIONS

- Roads prone to cracking and movement
- General wearing layers
