

**GREENPAVE™ U**

**THE ULTIMATE  
RECYCLED PRODUCT  
IN MODERN ASPHALT**

**GREENPAVE™ U**

GreenPave™ U is our dense-grade asphalt product, boasting the largest proportion of recycled materials in the GreenPave™ range. It contains a high quantity of reclaimed asphalt pavement (RAP), glass as a partial sand replacement, plastic additive in the form of processed consumer waste products and slag – a by-product of local steel manufacturing. This combination of ingredients is new to the market, and successfully reduces waste across all of the available recycling categories in modern asphalt production.

**GREENPAVE™ U  
CAN BE USED ON  
LOCAL ROADS**

**EVERY 500 TONNES OF GREENPAVE™ U IS EQUIVALENT TO:**

**250** TONNES OF RECYCLED ROAD & SLAG

**70,000** RECYCLED GLASS BOTTLES

**160,000** RECYCLED PLASTIC BAGS

## IMPROVED SKID RESISTANCE: AN IDEAL CHOICE AROUND HIGH-RISK ZONES

### CITYWIDE ASPHALT GROUP

We are one of Australia's leading producers of high-performance green asphalt products. Through our state-of-the-art plants, we offer an industry-leading range of sustainable products — including asphalt containing highly-engineered binders, high-content reclaimed asphalt pavement (RAP), and asphalt made with recycled glass, plastics or rubber.

### MULTIPLE BENEFITS

This product can be used as a wearing course on busy roads and footpaths. With the addition of slag, it also benefits from improved skid resistance, making it an ideal choice around high-danger zones such as childcare centres, schools, community buildings, transport hubs and shopping centres. The added improvement in skid resistance is enabled by the optimisation of micro texture characteristics in the slag. The product incorporating plastic additive performs better than normal dense-grade mixes, with improved rut resistance and resilience to hot weather deformation.

### WARM MIX

GreenPave™ U has the added benefit of being produced as a warm mix product. This enables us to manufacture at a lower temperature than normal — reducing both our fuel consumption and our environmental impact.

### ULTIMATE COMBO

The combination of locally sourced RAP, slag, plastic and glass in GreenPave™ U enables the Citywide Asphalt Group to take road resurfacing and recycling to the next level.

### APPLICATIONS

- Road and footpath wearing layers
- High-risk zones
