

# TURNING JUNKYARD WASTE INTO A VALUED RESOURCE

## GREENPAVE™ PB

Our premium plastic asphalt, GreenPave™ PB, contains waste plastics sourced from the automotive industry, which are fully dissolved into the binder to create a consistent, premium-quality product. Our special binder exhibits similar characteristics to polymer-modified binders, which deliver a superior product compared to normal asphalt. It also contains reclaimed asphalt pavement (RAP) and is made using our warm mix technology, making GreenPave™ PB an outstanding alternative to normal asphalt.

**ALEXANDRA AVE  
GREENPAVE™ PB  
PROJECT**

**EVERY 500 TONNES OF GREENPAVE™ PB IS EQUIVALENT TO:**

**400** CAR PARTS  
SAVED FROM  
LANDFILL

**100** TONNES OF  
RECYCLED  
ROAD

## IMPROVED RUTTING RESISTANCE AND STABILITY

### CITYWIDE ASPHALT GROUP

We are one of Australia's leading producers of high-performance green asphalt products. Through our state-of-the-art plants, we offer an industry-leading range of sustainable products — including asphalt containing highly-engineered binders, high-content reclaimed asphalt pavement (RAP), and asphalt made with recycled glass, plastics or rubber.

Printed on 100% recycled paper.

### POWERFUL PERFORMANCE

GreenPave™ PB's special binder delivers greater rutting resistance and stability than normal hot mix products made with a straight C320 binder. The waste plastics used in the manufacturing process are carefully selected based on their purity and compatibility with bitumen — ensuring that no micro-plastics will strip out of the finished pavement surface.

### THE FLEXIBLE CHOICE

We have supplied various projects with this product, which are all performing in line with our high expectations.

GreenPave™ PB can be manufactured on demand at either of Citywide's production facilities and is an excellent choice for contractors who want to play their part in the circular economy.

### SAVING ENERGY

GreenPave™ PB is a warm mix product, enabling us to produce it at lower temperatures and thereby reduce our fuel consumption and overall environmental impact.

### APPLICATIONS

- Local road wearing layers
- Footpaths
